EXPERIMENT – 3

NAME: AJAY PRASATH P

ROLL NO:240701023

Introduction

Rapid Application Development (RAD) is a software development approach that focuses on quick UI creation and continuous user feedback.

In this project, RAD is used to design a **Pet Adoption Mobile App – "MOCHI"**, where users can browse, select, and purchase pets easily.

Phase 1: Requirements Planning

This phase identifies app features and user needs.

App Features (Based on UI Screens) Navigation

Screens:

- Splash Screen
- Login / Signup
- Home
- Pet Categories
- Pet Listing
- Pet Details
- Cart
- Payment
- Order Confirmation
- Chat Support
- Delivery Tracking

User Actions

- Search pets
- View categories (Dogs, Cats, Birds, Fish)

- View pet details
- Add to cart
- Make payment
- Track order
- Chat with support

Requirements List

1. User can login/signup
2. User can search pets
3. User can view pet categories
4. User can view pet details (age, gender, health)
5. User can add pet to cart
6. User can select payment method
7. User can place order
8. User can view order confirmation
9. User can track delivery
10. User can chat with support

Phase 2: User Design

In this phase, UI screens are designed (based on your images).

Designed Screens

1. Splash Screen

- Displays animated puppy
- App loading screen

2. Login Screen

- Email & Password fields
- Login button
- Signup option

3. Home Screen

- Search bar
- Location display
- Pet categories (Dogs, Cats, Birds, Fish)
- Pet listing cards

4. Pet Details Screen

- Pet image
- Name (Sunny)
- Breed (Golden Retriever)
- Age, Gender
- Health status
- Description
- Price & Order button

5. Chat Screen

- User interacts with support
- Message bubbles UI

6. Payment Screen

Shipping address selection

- Payment methods: ○ Credit Card ○ PayPal ○ Google Pay ○ Apple Pay
- Total price
- Place order button

7. Order Confirmation Screen □

Success message

- Thank you screen

8. Delivery Tracking Screen

- Map view
- Delivery route
- Time and distance

Tools Used

- Figma (UI Design)
- Axure (Prototype simulation)

Phase 3: Construction

This phase focuses on building interactive prototypes.

Navigation Flow

Home → Categories → Pet Listing → Pet Details → Cart → Payment → Confirmation

Interactive Features

- Button navigation between screens
- Add to cart functionality
- Payment selection

- Chat interaction simulation
- Map tracking simulation

Dynamic Elements

- Smooth transitions between pages
- Interactive cards and buttons
- Real-time UI simulation

Testing & Iteration

- Tested UI flow in prototype mode
- Improved: ○ Layout ○ Colors ○ User experience

Phase 4: Cutover

Final stage where the app is prepared for delivery.

Final Output

- Completed UI design (MOCHI app)
- Prototype ready for development

Deployment Preparation

- Export design from Figma
- Share with developers
- Ready for coding (Flutter / React Native)

User Support

- Documentation provided
- Easy navigation design

- User-friendly interface

Conclusion

The RAD model helped to quickly design a **modern pet adoption app (MOCHI)** with:

- Fast development
- User-centered design
- Interactive UI
- Efficient workflow
